

## Tech Fellowship Program

The Tech Fellowship Program is a unique offering by GyanoHolic that sets us apart from everyone. We as an organization have extremely high values when it comes to ensuring quality and the right impact for all our students.

We do understand that knowledge when imparted can do wonders provided it reaches the end of its life cycle. The knowledge cycle is completed when one gets a chance to implement the learnings in an environment where he can think freely, fearlessly experiment, make mistakes and learn from them and have constant guidance at all steps to progress ahead. When one gets a platform like this, mastery is sure to happen.

The Tech Fellowship Program has been curated with the same objective. Students learn the concepts in the Bachelor's program, they specialize on the chosen subject in the Master's Program and then we have the Tech Fellowship Program where they are given the opportunity to work on live projects under the guidance of industry experts so that they get an experience of how the learnings are to be implemented at the ground level. Every student who enrolls for the Master's Program is automatically eligible for the Tech Fellowship program.

### STEP 01

#### Qualification for the Tech Fellowship Program

To qualify for the Tech Fellowship Program, you will first need to successfully complete the Master's Program. You will then be required to pass a test so that we know you are ready to go to the next level.

### STEP 02

#### Grooming for the Tech Fellowship Program

You will be assigned with a new Mentor who will be guiding you through each and every step in this journey of the Tech Fellowship Program. You will undergo further training on Project Management, work ethics, working in collaboration with a team, etc.

### STEP 03

#### Gain experience with in-house projects

You will then be given the chance to work on in-house projects under our Mentors for gaining experience and practice before you are assigned real projects. In this phase, you will work on proper capstone projects at par and at times even more challenging than the live projects. This is to train you and prepare you for the next level. You will be closely monitored in this phase. If you are found to be dedicated, reliable and satisfactory with the performance, you will be assigned a live project and will work under an Industry expert.

### STEP 04

#### Qualify for Live Projects

In this stage, you will be assigned a live project to work on. Live project means a project that is required to be delivered to a client in the committed time as per their requirements. You will be working under an actual Product Owner who has led a team and handled projects in reputed organizations. They will mentor you at every step and monitor your tasks and performance.

### STEP 05

#### Get promoted

As you work on projects, your Mentor will rate you on your performance. If you are found to be consistent in your performance, you will be promoted up the ladder where you will be given more challenging tasks. So, the number and level of tasks given to you will depend on your rating.

### STEP 06

#### Handling leadership positions

If you are found to be trained and capable enough to handle the tasks independently, then you will be given the opportunity to guide and mentor new fellows. This way, you will also gain managerial experience.

#### Important Note

The entire concept of Tech Fellowship program is not to be looked at as employment. The prime objective behind this is to give a platform to our students to implement their learnings in a guided environment. The students will need to give some commitment in terms of time on a weekly basis to ensure that the operations are carried on smoothly and client expectations are met. We as an organization charge only a minimum amount from our clients just to ensure that our operational costs are met. Profits if made are passed on to our students as kind.
